

ELVIS SEGBEAYA

Katy, TX 77449 | 346.264.6837 | segbeayaelvis@gmail.com | linkedin.com/in/uniquely-elvis

PRINCIPAL ARCHITECT • DATA, AI & ENTERPRISE PLATFORMS

Architect with an unusual span: a decade spent moving from quantitative modeling and data engineering into full ownership of enterprise platform, cloud, and AI governance. Designs the data protection and platform architecture a regulated business runs on — one that tripled revenue (\$26M to \$81M) in two years while the technology function stayed a single seat, builds the reporting layer executives decide from, and leads responsible AI adoption as a standing governance function rather than a one-off project. Formally credentialed in the business-technology bridge through an M.S. in Technology Commercialization from UT Austin (McCombs), on a B.S. in Mathematics.

CORE COMPETENCIES

Architecture & Governance: Enterprise data and security model design, permission architecture, event-driven patterns, technical standards, platform evolution decisions, key-person risk and continuity planning

Data Engineering & Protection: ETL pipeline design, data migration, data quality controls and governance, AWS backup architecture, retention and recovery strategy, regulatory and audit compliance

AI & Technology Enablement: AI adoption strategy, phased Claude implementation, user enablement, responsible-use guardrails and MCP access control, emerging technology evaluation

Analytics & Reporting: Python, R, SQL/T-SQL, Power BI, Tableau, SSRS, profile-tailored dashboards at organizational scale, statistical and financial modeling, forecasting

Platform Engineering: Salesforce architecture (Apex, Lightning Web Components, SFDX, Flow, Platform Events), AWS, Microsoft Entra app registrations, connected apps, REST/JSON integrations

Industry Exposure: Financial services (CDO/CLO structures, derivative pricing, risk exposure), government/DoD and CMMC support, aviation aftermarket, energy, retail and supply chain

PROFESSIONAL EXPERIENCE

Source One Spares

FEB 2024 – PRESENT

Solutions Engineer — operating as Platform & Technology Governance Lead | [City, ST]

Aviation aftermarket parts distributor; revenue grew from \$26M to \$53M to \$81M across this period. Owns enterprise platform architecture, cloud data protection, business systems, and AI enablement as a single function.

- Lead organizational AI adoption as a standing governance function — phased Claude implementation, user enablement, capability evaluation, and responsible-use guardrails including deliberate restriction of MCP access during controlled rollout.
- Architected AWS-based backup and recovery for the full enterprise data estate — standard records, binary files, and bulk datasets — with the supporting infrastructure, retention model, and data protection and recovery strategy.
- Hold full architecture ownership of the enterprise Salesforce platform: data model, security and permission architecture, automation, and integration design, including a complete production migration into GovCloud.
- Designed and built Tower, a search platform that branches across and connects disconnected systems to shorten time-to-data; internally estimated at approximately \$2M in annual business value.
- Deliver dashboards at organizational scale, tailored to each user profile type, so reporting reflects what each role actually decides on.
- Diagnosed a silent production failure in approval automation — submissions cancelled within roughly two seconds, no error, no standard log trace — by querying internal audit tables directly and reading execution timing patterns in the data.
- Ruled out three remediation approaches on managed-package, platform, and data-integrity grounds, then implemented a Platform Event queue decoupling submission into a separate transaction: an enterprise distributed-systems pattern applied without custom code or vendor modification.
- Automated core business processes including threshold-based purchase approvals, vendor risk listing, shop management correlation, payment processing, and Net 30 terms.
- Support the government/DoD business line with compliant workflows and contributed to CMMC certification through implementation and gap remediation.
- Act as the cross-functional bridge between business operations, engineering, administration, and executive technology needs.

NOV

FEB 2023 – FEB 2024

Software Engineer, Application Support | Houston, TX (Remote)

- Led troubleshooting and root-cause analysis for enterprise applications serving oil and gas operations, using Python, SQL, AWS, and DevOps tooling.
- Instrumented and analyzed application logs in AWS CloudWatch to isolate recurring failure patterns and improve platform stability.
- Drove feature development and API integration work (REST, JSON, Postman) alongside cross-functional Agile teams tracked in Jira.
- Authored installation guides, user manuals, and release notes; reviewed and standardized documentation produced by junior engineers.

BNY Mellon — Corporate Trust

JUN 2022 – OCT 2022

Lead Analyst, Data Management & Quantitative Analysis | Houston, TX (Remote)

- Led a team of 9–12 analysts building and maintaining CDO/CLO deal models, reports, and user tools derived from legal documentation and client specifications.
- Built ETL pipelines extracting from disparate sources into warehouse targets, and implemented data quality controls, governance policies, and security measures for regulatory compliance.
- Reviewed, modified, and tested changes to complex financial models; analyzed moderately complex structures and amendments; supported audit examination and response.
- Collaborated with international cross-functional teams across IT, operations, risk, and compliance to align analytics initiatives.
- Introduced a structured training pipeline and peer-review system that raised delivery consistency across a fully remote team.

BNY Mellon — Loan Conversion Platform

MAY 2020 – MAY 2022

Analytics Analyst I | Houston, TX (Remote)

- Developed statistical, financial, and econometric models analyzing asset performance, securities data, derivative pricing, and risk exposure.
- Ran production models, identified exceptions, and implemented corrective action; interpreted findings and authored standard reporting.
- Served as designated product-launch tester, validating use-case scenarios from end-user and internal-staff perspectives.

EARLIER EXPERIENCE

Grocers Supply

SEP 2018 – JUN 2019

Data Analyst | Houston, TX

- Executed a data migration of 40,000+ product records and restructured in-store layout and design patterns.
- Automated a manual consolidation process with VBA/macros and built SSRS, Tableau, and Power BI reporting for pricing and demand forecasting.
- Marketing and pricing analysis credited with a ~20% increase in company revenue.

WageWorks

JUL 2016 – MAY 2018

Account Consultant | Irving, TX

- Primary point of contact for assigned benefits-program clients; ran performance reviews, training, and feedback cycles, coordinating with operations, sales, and product to resolve issues.

EDUCATION

M.S., Technology Commercialization — McCombs School of Business, The University of Texas at Austin

STEM-designated program in technology transfer, commercialization strategy, and venture planning. Ranked #3 nationally for entrepreneurship (Eduniversal) at time of completion.

B.S., Mathematics — University of Houston
